Liquid Metal Coatings

Liquid Metal Coatings can apply a real metal finish to just about anything: plaster, glass, stone, foam, paper, wood, plastics, ceramic - even fabric. This is real metal - a living finish, with all the same characteristics such as sheen, hardness, texture and reflection.

Fabricators, designers and artists can achieve the authentic look of metal on signs, displays, architectural details, custom tiles, furniture, products and sculptures. The wide variety of uses is limited only by the imagination. Unless it breathes or melts, we can coat it in real metal.

Available in Stainless Steel, Nickel-Silver, Aluminum, Bronze, Copper, Brass, Iron or Pewter -or any combination -for a wide variety of metal colors. Our custom finishing and polishing techniques can add unique characteristics to your piece including weathering, antiquing, inlays, mixed metal, high-polish, satin, machining and engraving.

The process will not impact the underlying substrate -no warping, shrinking or distortion of any kind, because there's no heat involved. Anything you can paint, you can have coated with real, lustrous, durable metal.

Our services include preparation of the substrate, applying, curing and finishing the new metal surface. Additional services include mold fabrication, casting, custom blending of metals, matching existing patinaed metals and applying textures to your piece.
